

Reliable service for sludge water treatment plants

Our service ensures operational reliability

The environmental regulations for the proper disposal of sludges from the stones and soils sectors will become even stricter in the near future. We are aware that this development will have an impact on the technical requirements of existing plants and new plants to be built.

In addition to comprehensive consulting and support over the life cycle of technical plants, we prepare concepts and analyses for their optimization and modernization. This ensures precise budgeting, which contributes to operational safety and high quality management.

Comprehensive service quality

Qualified maintenance extends the service life of plants. Our service technicians provide you with expertly.

Investment security

- Determination of interfaces
- Planning short- and long-term operating cost reductions/ maintenance planning
- Ensuring economic efficiency and operational reliability in the long term

Holistic planning & execution
